Story

Date	26 October 2026
Team ID	
Project Name	EV Market Performance and Insights
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Story Point 1 - Market Snapshot**: 1.55B total EV sales at an average price of $64,921, with India, China and Vietnam leading production output.
- **Story Point 2 - Range and Value**: Luxury Sedans and SUVs offer the longest range, and Electric Buses retain the most value after 3 years (14.5M).
- **Story Point 3 - Sales Trend**: Annual sales are stable from 2018 to 2026, led by Two-Wheeler Scooters, while Electric Trucks sell the least.
- **Story Point 4 - Battery Technology**: NMC and LFP batteries lead in sales units, while Solid-State and LFP show the longest cycle life.
- **Story Point 5 - Charging and Impact**: High-capacity vehicles charge fastest (about 350 kW) but use more energy per km, and 738K tons of CO2 are saved per year across regions.
